VARIOUS BOOKS is a collection of, potentially, 4,600 speculative digital ‘books’ with ‘antiquarian’ properties, generated and stored on chain. Launched in October 2021, the project did not mint out and has remained relatively inert, except for a minor flurry of mints in July 2022. Secondary sales are few and typically low-value: the collection has done 9 ETH total volume on OpenSea.

Book titles are determined by a selection algorithm that makes randomised word choices from a fixed lexicon following certain formatting structures. This process produces titles with a recognisable, hollow poetry: Haunted Parrots Amongst The Problems, Arrangement Before The Misty Centuries, and Pure Interaction (the latter is in poor condition, unfortunately). At the time of writing, 32.8% of the 2,812 VARIOUS BOOKS generated have titles that follow the AN (adjective, noun) format. Of these, just six have the word Book as their noun.

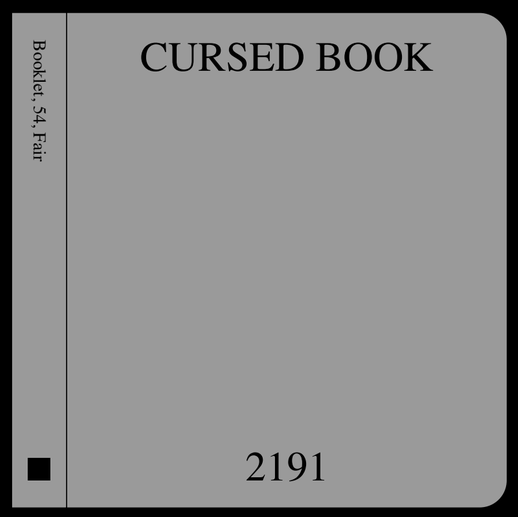

Those familiar with VARIOUS BOOKS lexicon and lore know that within the roughly 1,800 unrealised mints lie dormant titles of potentially immeasurable significance. First Book? Hidden Book? Historic Book? Pure Book? And, yes — perhaps, perhaps — Complete Book.
